ELECTRICITY AND MATTER J.J. THOMSON

About the author:

Sir Joseph John "J. J." Thomson, 1856 – 1940 was an English physicist. In 1897, Thomson showed that cathode rays were composed of a previously unknown negatively charged particle, and thus he is credited with the discovery and identification of the electron; and, in a broader sense, with the discovery of the first subatomic particle. Thomson is also credited with finding the first evidence for isotopes of a stable (non-radioactive) element in 1913, as part of his exploration into the composition of canal rays (positive ions). He invented the mass spectrometer.

Thomson was awarded the 1906 Nobel Prize in Physics for the discovery of the electron and for his work on the conduction of electricity in gases.

From inside the book:

In these Lectures given at Yale University in May, 1903, I have attempted to discuss the bearing of the recent advances made in Electrical Science on our views of the Constitution of Matter and the Nature of Electricity; two questions which are probably so intimately connected, that the solution of the one would supply that of the other. A characteristic feature of recent Electrical Researches, such as the study and discovery of Cathode and Rontgen Rays and Radio-active Substances, has been the very especial degree in which they have involved the relation between Matter and Electricity.

In choosing a subject for the Silliman Lectures, it seemed to me that a consideration of the bearing of recent work on this relationship might be suitable, especially as such a discussion suggests multitudes of questions which would furnish admirable subjects for further investigation by some of my hearers.

Contents:

CHAPTER- I

FAQS

REPRESENTATION OF THE ELECTRIC FIELD BY LINES
OF FORCE

CHAPTER II

ELECTRICAL AND BOUND MASS

CHAPTER III

EFFECTS DUE TO THE ACCELERATION OF FARADAY
TUBES

CHAPTER IV

THE ATOMIC STRUCTURE OF ELECTRICITY

CHAPTER V

THE CONSTITUTION OF THE ATOM

CHAPTER VI

RADIO-ACTIVITY AND. RADIO-ACTIVE SUBSTANCES
