Geocomputation

Robert J. Abrahart

Geocomputation Robert J. Abrahart

GeoComputation follows from Geographic Information Science. It comes into use once a GIS database has been set up with a digital data library, and expanded and linked to a global geographical two or three dimensional co-ordinate system. It exploits developments in IT and earth observing technologies taking the notion of GIS beyond data and towards its analysis, modeling, and use in problem solving. This book provides pointers on how to harness these technologies in tandem and in the context of multiple different subjects and problem areas.
