Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies)

Accurate measurement at the nano-scale - nanometrology - is a critical tool for advanced nanotechnology applications, where exact quantities and engineering precision are beyond the capabilities of traditional measuring techniques and instruments. Scanning Probe Microscopy (SPM) builds up a picture of a specimen by scanning with a physical probe; unrestrained by the wavelength of light or electrons, the resolution obtainable with this technique can resolve atoms. SPM instruments include the Atomic Force Microscope (AFM) and Scanning Tunneling Microscope (STM).

Despite tremendous advances in Scanning Probe Microscopy (SPM) over the last twenty years, its potential as a quantitative measurement tool have not been fully realized, due to challenges such as the complexity of tip/sample interaction. In this book, Petr Klapetek uses the latest research to unlock SPM as a toolkit for nanometrology in fields as diverse as nanotechnology, surface physics, materials engineering, thin film optics, and life sciences. Klapetek's considerable experience of Quantitive Data Processing, using software tools, enables him to not only explain the microscopy techniques, but also to demystify the analysis and interpretation of the data collected.

In addition to the essential principles and theory of SPM metrology, Klapetek provides readers with a number of worked examples to demonstrate typical ways of solving problems in SPM analysis. Source data for the examples as well as most of the described open source software tools are available on a companion website.

- Unlocks the use of Scanning Probe Microscopy (SPM) for nanometrology applications in engineering, physics, life science and earth science settings.
- Provides practical guidance regarding areas of difficulty such as tip/sample interaction and calibration - making metrology applications achievable.
- Gives guidance on data collection and interpretation, including the use of software-based modeling (using applications that are mostly freely available).

From reader reviews:

Adrian Woodson:

This Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) book is not ordinary book, you have after that it the world is in your hands. The benefit you get by reading this book is usually information inside this reserve incredible fresh, you will get facts which is getting deeper a person read a lot of information you will get. This particular Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) without we comprehend teach the one who looking at it become critical in considering and analyzing. Don't end up being worry Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) can bring when you are and not make your case space or bookshelves' turn into full because you can have it in your lovely laptop even cellphone. This Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) having fine arrangement in word along with layout, so you will not truly feel uninterested in reading.

Dorothy Marr:

The particular book Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) has a lot of information on it. So when you make sure to read this book you can get a lot of benefit. The book was written by the very famous author. The writer makes some research prior to write this book. This kind of book very easy to read you will get the point easily after scanning this book.

Elliott Salazar:

Is it anyone who having spare time subsequently spend it whole day by simply watching television programs or just resting on the bed? Do you need something new? This Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies) can be the respond to, oh how comes? A book you know. You are so out of date, spending your spare time by reading in this completely new era is common not a nerd activity. So what these textbooks have than the others?

Leon Fisher:

What is your hobby? Have you heard this question when you got college students? We believe that that issue was given by teacher on their students. Many kinds of hobby, Every person has different hobby. And also you know that little person such as reading or as reading through become their hobby. You must know that reading is very important and also book as to be the thing. Book is important thing to add you knowledge, except your current teacher or lecturer. You get good news or update about something by book. Different categories of books that can you take to be your object. One of them is Quantitative Data Processing in Scanning Probe Microscopy: SPM Applications for Nanometrology (Micro and Nano Technologies).
