RAMP is a structured process for evaluating and controlling risk in major projects and this practical, working handbook is for everyone involved in the financial, commercial, legal or engineering aspects of a project. Providing a framework for identifying, analysing and responding to risks and then placing a financial value on them, the RAMP process covers the whole life of the asset involved, including post-completion reviews and methods for controlling any risks that remain, to increase the chances of overall project success. It can be applied to hard projects involving construction of physical assets or soft projects involving business acquisitions or the launch of a new product.
