# Photonic Crystals: Molding the Flow of Light, Second Edition

John D. Joannopoulos, Steven G. Johnson, Joshua N. Winn, Robert D. Meade

**Photonic Crystals: Molding the Flow of Light, Second Edition** John D. Joannopoulos, Steven G. Johnson, Joshua N. Winn, Robert D. Meade

Since it was first published in 1995, *Photonic Crystals* has remained the definitive text for both undergraduates and researchers on photonic band-gap materials and their use in controlling the propagation of light. This newly expanded and revised edition covers the latest developments in the field, providing the most up-to-date, concise, and comprehensive book available on these novel materials and their applications.

Starting from Maxwell's equations and Fourier analysis, the authors develop the theoretical tools of photonics using principles of linear algebra and symmetry, emphasizing analogies with traditional solid-state physics and quantum theory. They then investigate the unique phenomena that take place within photonic crystals at defect sites and surfaces, from one to three dimensions. This new edition includes entirely new chapters describing important hybrid structures that use band gaps or periodicity only in some directions: periodic waveguides, photonic-crystal slabs, and photonic-crystal fibers. The authors demonstrate how the capabilities of photonic crystals to localize light can be put to work in devices such as filters and splitters. A new appendix provides an overview of computational methods for electromagnetism. Existing chapters have been considerably updated and expanded to include many new three-dimensional photonic crystals, an extensive tutorial on device design using temporal coupled-mode theory, discussions of diffraction and refraction at crystal interfaces, and more. Richly illustrated and accessibly written, *Photonic Crystals* is an indispensable resource for students and researchers.

- Extensively revised and expanded
- Features improved graphics throughout
- Includes new chapters on photonic-crystal fibers and combined index-and band-gap-guiding
- Provides an introduction to coupled-mode theory as a powerful tool for device design
- Covers many new topics, including omnidirectional reflection, anomalous refraction and diffraction, computational photonics, and much more.

### **From reader reviews:**

#### **John Kuykendall:**

This Photonic Crystals: Molding the Flow of Light, Second Edition are generally reliable for you who want to be a successful person, why. The reason of this Photonic Crystals: Molding the Flow of Light, Second Edition can be on the list of great books you must have is usually giving you more than just simple looking at food but feed a person with information that might be will shock your prior knowledge. This book is actually handy, you can bring it everywhere and whenever your conditions both in e-book and printed versions. Beside that this Photonic Crystals: Molding the Flow of Light, Second Edition giving you an enormous of experience such as rich vocabulary, giving you trial of critical thinking that we understand it useful in your day pastime. So , let's have it and luxuriate in reading.

#### **Brian Register:**

Spent a free a chance to be fun activity to try and do! A lot of people spent their down time with their family, or their own friends. Usually they carrying out activity like watching television, planning to beach, or picnic within the park. They actually doing same thing every week. Do you feel it? Do you want to something different to fill your own free time/ holiday? Can be reading a book can be option to fill your totally free time/ holiday. The first thing you will ask may be what kinds of guide that you should read. If you want to test look for book, may be the guide untitled Photonic Crystals: Molding the Flow of Light, Second Edition can be very good book to read. May be it may be best activity to you.

#### **Jonathan Bean:**

People live in this new moment of lifestyle always try and must have the time or they will get wide range of stress from both daily life and work. So , if we ask do people have extra time, we will say absolutely of course. People is human not only a robot. Then we ask again, what kind of activity do you possess when the spare time coming to an individual of course your answer can unlimited right. Then do you ever try this one, reading ebooks. It can be your alternative inside spending your spare time, typically the book you have read is usually Photonic Crystals: Molding the Flow of Light, Second Edition.

#### **Monique Hightower:**

As we know that book is significant thing to add our information for everything. By a book we can know everything we wish. A book is a list of written, printed, illustrated as well as blank sheet. Every year was exactly added. This publication Photonic Crystals: Molding the Flow of Light, Second Edition was filled in relation to science. Spend your time to add your knowledge about your science competence. Some people has diverse feel when they reading the book. If you know how big good thing about a book, you can experience enjoy to read a book. In the modern era like at this point, many ways to get book that you just wanted.
